Career Posting: R&D Hardware Technician

Location: Mountain View, CA, 94043
Position Type: Full Time

Company Description

Ettus Research™ is the world's leading supplier of Software-Defined Radio (SDR) platforms, including the Universal Software Radio Peripheral (USRP™) family of products. USRP™ products are used by thousands of engineers worldwide and remain the top choice in software defined radio hardware for algorithm development, exploration, and prototyping.

We are a small engineering-focused company, located in Silicon Valley. Specializing in using the latest components to advance commercially-available radio equipment, we are an agile design team that takes pride in our 'hacker' / 'maker' culture. We are heavily involved in the open-source software community through our open-source *USRP Hardware Driver*™ (UHD™) software, and our support & use of the *GNU Radio* project & software.

Career Information

Founded in 2004 and acquired by National Instruments™ in 2010, Ettus Research™ is an established company with solid financials. Competitive and growing, we are looking for enthusiastic engineers to join our team. Focused in the SDR market, we provide a dynamic environment where your skills will be challenged & developed, and you will be able to work on the latest SDR technology.

Position Details

This opening is for a full-time R&D Hardware Technician. A technician in this role will be expected to take prototype designs through the build & manufacturing process, manage parts & inventory, and support the new product process. This position is also responsible for hardware technical support, coordinating RMAs and handling RMA test / debug, and circuit board re-works. Additionally, a technician in this role will manage the hardware lab.

Enthusiasm, self-motivation, and creative problem-solving are musts. Work hours are flexible, we nurture a small-office setting, and employees receive full benefits as well as competitive retirement and investment opportunities (401k & ESPP).

Candidate Requirements

- Technical degree or previous industry experience.
- Strong understanding of electronics fundamentals.
- Solid hardware lab equipment skills (e.g., soldering, oscilloscope use, etc.,)
- Strong organizational ability.
- Good technical writing & communication skills.

Recommended Experience

- Bachelor's Degree (or foreign equivalent) in Electrical Engineering, or a related field.
- Experience with parts management databases and hardware build processes.
- Previous work managing and organizing hardware lab spaces & equipment.
- Familiarity with RF and analog fundamentals.

Location

This position is located in the San Francisco Bay Area.

Other Requirements

Candidates must be eligible to work in the United States, although U.S. Citizenship is **not** required.

Availability

We are looking for candidates to fill this position and start immediately!

How to Apply

Please submit your résumé / CV to **jobs@ettus.com**.
