HOPE YOU ENJOYED YOUR CONTACT WITH JARVIS ISLAND

When the MAKANALANI, a 71-foot offshore hull-type sailing and engine-powered vessel, set sail for a 2400-mile and 35-day cruise out of Hawaii to reach Jarvis, the 1990 AH3C/KH5J DXpedition got underway.

Jarvis is located just 30 km south of the Equator in a dry region of the Pacific. It is a small flat coral atoll with a desert climate and a topography resembling a shallow saucer. No trees grow here, and temperatures frequently exceed 40 degrees Celsius under intense sunshine, with steady northeasterly winds and occasional clouds providing the only relief from the heat.

Jarvis is home to vast quantities of seabirds; more than a dozen types nest on the island, and at times the population exceeds one million. Crabs, sharks, manta rays, and moths are also present in large numbers.

The first human inhabitants arrived from the United States in the late 1850s. Hawaiian laborers sweated for over 30 years, digging away at one of America's richest guano mines. Quarries, rock piles and tramways still remain from this period. After Jarvis' resources were depleted, the island was abandoned for 50 years.

In 1938 the United States colonized Jarvis (along with Baker and Howland Islands) with Hawaiian young men. Each spent six months on Jarvis, taking weather observations, fishing, building a small community of shacks, planning an airplane runway and operating their ham radios! At the start of WW II, a Japanese submarine shelled the island, killing three men. The survivors were evacuated and Jarvis was again abandoned. Today Jarvis Island is a National Wildlife Refuge, with entry tightly restricted by the US government.

We are grateful to all of you - 55,000 contacts - who waited so patiently. In particular, we wish to credit those who made the AH3C/KH5J operation possible: US Fish & Wildlife Service, NCDXF, ICOM America, Japanese CQ Magazine, Ameritron/MFJ, OH DX Group, OZ DX Group, Lynx DX Group, JA1BK, FE6CVR, AD1S, KB2VO, KH6AY, KH6IJ, AH6I0, KH6JEB, KH6VP, NM3U, NZ7E, WORLX, W6OAT, W6JKV, WB2DND, WB6DSV, WD6ERA, W9CD, TG9VT, T32AN, VP2ML and Captain Anthony Clarke with his professional crew on the MAKANALANI.
